

MMA 3000 Spray Machine

Epic Solutions' new MMA3000 spray cart is a high pressure spray system that utilizes one hydraulic pump to power two identical material pumps to guarantee 1:1 material ratio.

The MMA 3000 features a 5 CFM compressor which pressurizes the solvent tank for cleaning the mix tube. The material line can also be cleaned with compressed air prior to using solvent for less wasted material.

The pressurized air system also controls paint and beads via two mechanical solenoids mounted on the handle bars allowing for paint and beads to be operated independently.

The MMA3000's biggest feature is a pressurized bead system that blasts the beads into the material resulting in brighter lines that keep their reflectivity longer.

Bead pattern with pressured bead system

Features:

- A larger pump which allows more material output at faster speeds.
- Option for double gun setup
- A large filter system to prevent unwanted clogs
- No tanks to clean: use the buckets that the material comes in.
- Detachable gun with 25' of hose for painting arrows and messages
- Mixing tube on end of the gun so operator isn't bending as much when doing handwork.
- Front wheel unlocks for painting curves
